Highly necrotic tumors may cause fever and clinically simulate infectious process Tend to invade adrenal vein, vena cava, adjacent kidney and retroperitoneum; may cause thromboemboli Metastases to liver (60%), regional lymph nodes (40%), lungs (40%), peritoneal and pleural surfaces, bone, skin (anaplastic tumors) or retroperitoneum

### **Pathology Outlines - Adrenal cortical carcinoma**

It's not clear what causes adrenal cancer. Adrenal cancer forms when something creates changes (mutations) in the DNA of an adrenal gland cell. A cell's DNA contains the instructions that tell a cell what to do. The mutations can tell the cell to multiply uncontrollably and to continue living when healthy cells would die. When this happens, the abnormal cells accumulate and form a tumor.

### **Adrenal cancer - Symptoms and causes - Mayo Clinic**

The Pathology Atlas contains mRNA and protein expression data from 17 different forms of human cancer. Correlation analyses based on mRNA expression levels of human genes in cancer tissue and the clinical outcome for almost 8000 cancer patients is presented in a gene-centric manner, and includes more than 18000 Kaplan-Meier plots with high significance ( $p < 0.001$ ).
